› PROTECT CUSTOMER DATA

PROVE IT ANYTIME

INCREASE RECURRING REVENUES

SERVE REGULATED MARKETS

REDUCE RISKS

SaaS vendors are responsible for protecting their customers' data all while regulatory compliance is increasingly harder to achieve.

Breaking into new verticals or addressing regulated markets often requires tangible data security and complete audit trails.

Cyber attacks get more sophisticated and automated. Every cloud application is a potential target. Data itself must be protected.

Sensitive data protected at application level. Your staff has zero access to customer data.

Benefit from Kyos' experts pool with two decades of cybersecurity and secure managed service experience.

Fast integration into applications via documented APIs and expert support for configuration & testing.

Refocus on application development and innovative service creation. Kustodyan handles data protection.

Search, sort, and order functionalities are preserved, while the application works with protected data.

Redefined data security governance gives end customers 100% data access control, in all scenarios from production to offshore technical support to breach investigation.

Kustodyan: a new bread of data protection for SMB cloud SaaS applications

All applications in the cloud such as CRM, ERP, CLM process sensitive data daily. Kustodyan helps CEOs never have to explain why sensitive data leaked in plain text.

Kustodyan leverages RegData's innovative, flexible and field proven bank-grade technologies to offer application-level data protection that goes beyond database encryption or role-based access control, which today are all necessary yet not sufficient to protect the most critical information.

Especially tailored for SMB SaaS application developers, Kustodyan is available through secure APIs, ready to enhance any application such as a CRM, an HRIS, an ERP or a specific business application. Through robust Key Management Services, end-customers enjoy total access control over their data, paired with audit-ready reports and redefined governance.

Hosted in Switzerland, Kustodyan embeds Swiss data protection technologies. It aligns with typical SaaS business models to enable faster growth, notably in regulated markets.

Regulatory compliance & Reduced Risks

› Reduce liability. SaaS vendor staff cannot access customer data

› **Turn breaches into non-event. Only worthless tokens are stolen**

› Simplify and accelerate regulatory approvals

› Segregation of duties aligned with stringent requirements

› Drastically improved data sovereignty posture

Key Service Characteristics

› Complements traditional measures at data level

› Data protection service accessible though APIs

› ISO 27001 and Cyber Safe certified company

› Bank-grade Swiss data protection technologies

› 24/7 active security monitoring
